

600+ stores scanned in 90 days, before a single contractor mobilized.

Dollar General needed every general contractor on a nationwide renovation program working from real store conditions instead of assumptions. Prime-Net delivered the reference.

THE CHALLENGE

A renovation program spread across hundreds of stores and multiple general contractors. Every GC needed to understand existing conditions at sites they had never visited, and sending crews out for preliminary walk-throughs would have added cost and weeks to the schedule.

WHAT PRIME-NET DID

Prime-Net captured a Matterport digital twin of each location ahead of construction, routing crews in geographic clusters to hold a pace of roughly 50 stores per week. Each scan produced a walkable, dimensionally measurable record of the store as it stood.

THE RESULT

Dollar General handed the GCs a single, consistent reference for every store in the program. Contractors could walk each site remotely, verify conditions, and plan their work before mobilizing, with one survey standing in for repeat trips across the country.

SCOPE DELIVERED

- Matterport capture at 600+ store locations
- Geographic clustering and route scheduling
- Consistent capture standard at every site
- Dimensionally measurable digital twins
- Delivered as a GC-ready reference set
